jainneel1122@gmail.com | +91-8989189057 | [LinkedIn](#) | [GitHub](#) | [Geeks-for-Geeks](#)

SUMMARY

- Machine Learning Engineer focused on Generative AI and scalable ML systems
- Built RAG-based applications using LangChain, FastAPI, and vector databases
- Designed and deployed an end-to-end ML pipeline for predictive modeling
- Experienced in NLP, semantic search, and LLM-based solutions
- Created REST APIs and data applications for real-time insights
- Strong in data structures, algorithms, and system design
- Delivering efficient, scalable, and production-ready solutions

EDUCATION

VIT Bhopal University, Bhopal (M.P.)

Bachelor of Technology, Computer Science Engineering

2021 - 2025

CGPA: 8.51

Relevant coursework - Object Oriented Programming, Database Management System, Data Structures and Algorithms, Operating Systems, Computer Networks, Advance Data Structures and Algorithms, Machine Learning, Data Analytics

St. Joseph's Convent Senior Secondary School, Sagar (M.P.)

12th | Mar 2021 | CBSE | Percentage: 80.8%

10th | Mar 2018 | CBSE | Percentage: 77%

PROJECTS

AI Travel Assistant Mapping | [GitHub](#)

Jun 2025 – Nov 2025

- Designed and enhanced an AI-powered travel assistant using Python, FastAPI, and LangChain, enabling real-time itinerary generation across 500+ user queries.
- Built a Retrieval-Augmented Generation (RAG) pipeline using Hugging Face Transformers, improving response relevance by ~30% through context-aware retrieval.
- Implemented semantic search using Sentence Transformers and Qdrant, reducing information retrieval time by ~40%.
- Engineered and deployed scalable REST APIs, handling concurrent requests with improved system responsiveness.
- Optimized backend processing pipeline, reducing overall response latency by ~25%.

Employee Absenteeism Prediction | [GitHub](#)

Jan 2024 – Sep 2024

- Deployed an end-to-end ML pipeline using Logistic Regression to predict employee absenteeism with ~82% accuracy.
- Performed data preprocessing and feature engineering on 1,000+ records, improving model performance and stability.
- Applied feature selection and backward elimination, reducing model complexity while maintaining predictive performance.
- Built Tableau dashboards to visualize key factors (age, expenses, reasons), enabling data-driven decision-making.
- Validated model performance using train-test split and cross-validation techniques to ensure robustness.

Housing Data Analysis – Power BI | [GitHub](#)

Mar 2023 – Oct 2023

- Built a cloud-based analytics solution using Google BigQuery and Power BI to process and analyze 10,000+ housing records.
- Cleaned and transformed raw datasets, improving data accuracy and consistency for reporting.
- Developed interactive dashboards tracking YoY sales, pricing trends, and performance metrics, improving stakeholder visibility.
- Optimized SQL queries and data models, reducing dashboard load time by ~35%.
- Derived actionable insights using price-per-sqm metrics to evaluate market trends and sales efficiency.

SKILLS

Languages:

Python, SQL

Frameworks & Tools:

FastAPI, Streamlit, LangChain, LangGraph, Hugging Face Transformers, REST APIS

Machine Learning:

Model Evaluation, Feature Engineering, Logistic Regression, Hyperparameter Tuning

Generative AI:

RAG, Vector Databases (Qdrant), NLP, Sentence Transformers

Data Tools:

Power BI, Tableau, Google BigQuery, Excel

Libraries:

Pandas, NumPy, Matplotlib, Seaborn, Scikit-learn

Other:

Git, Data Pipelines, Agile Methodologies

CERTIFICATIONS

- AWS Cloud Practitioner
- Salesforce AI Associate
- Microsoft Power-App Maker Certified
- Cloud Computing | NPTEL
- Applied Machine Learning in Python | Coursera

ACHIEVEMENTS

- Solved 70+ problems on LeetCode
- Active coding profile on GeeksforGeeks (50+ streak)
- Participated in GFG Solving for India Hackathon | Participated in Unstop Event – Udaan
- Led a winning team in Agneepath Debate Contest
